Called It

The third umpire for your match group chat

WORKING ARTIFACT

calledit-live.vercel.app

No login, no install. Best on a phone.

SOURCE CODE

README explains how it works.

NOTE

PROBLEM

Fans don't just watch a match, they call it: "Bumrah gets him this over", "200 pakka". 63% of Indian fans who use a phone during a match are messaging friends and family (YouGov 2025). But those calls vanish in the scroll. Nobody keeps score, so the loudest friend wins, not the one who was right. Polls don't help: everyone gets the same canned questions, never the take you actually have.

HOW IT HELPS

Just chat, in English or Hinglish. An AI third umpire sits in the group, spots the predictions hidden in the banter, turns each into a checkable call, rates its boldness by simulating the rest of the innings, settles it ball by ball, and posts the receipt: "Called it!" or a roast. Obvious guesses earn nothing. No money, no prizes: the stake is being right in front of your friends. The demo replays the 2024 T20 World Cup final.

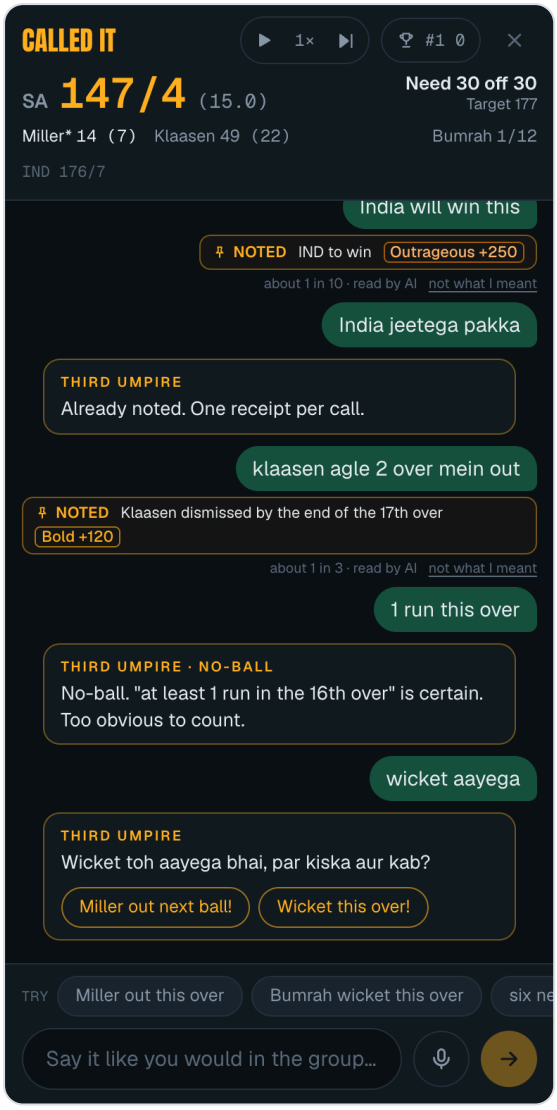

AI TOOLS

Google Gemini 3.5 Flash-Lite reads the chat and writes the receipts. A Monte Carlo simulator, trained on 415 past T20 internationals, rates boldness. Built with Claude Code.

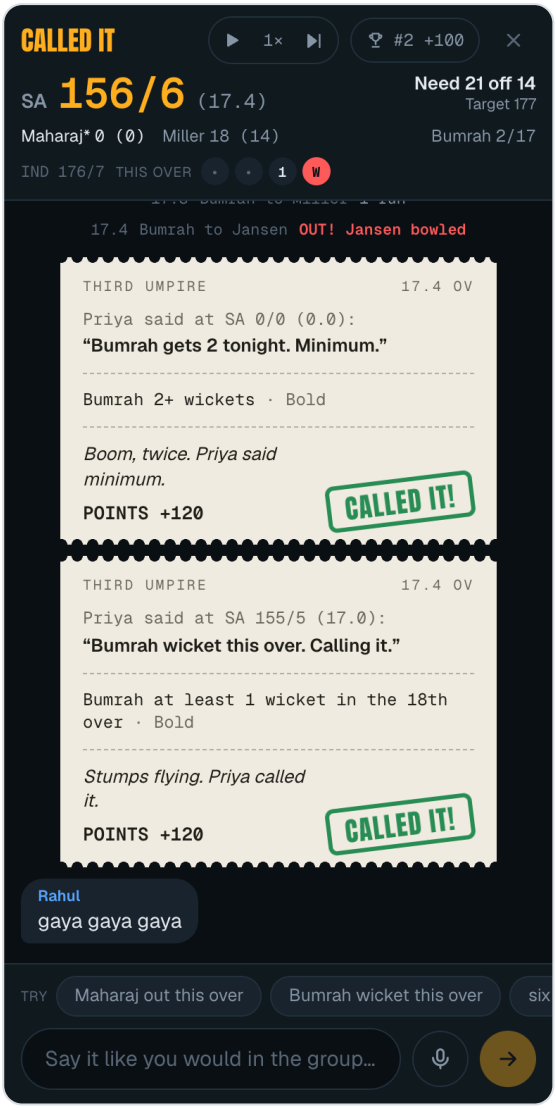

TRY IT IN 30 SECONDS

1. Type any name, pick **"30 needed off 30"**, tap **Join the chat**.
2. Chat as you would in a match group, for example `klaasen agle over mein out pakka` or `India will win this`.
3. The umpire notes it as a checkable call and rates how bold it is. Plain banter gets no reply; a vague take gets a nudge.
4. Press play or next-ball. When the deciding ball is bowled, a receipt appears with the stamp and points. At the end you get a Pundit Card.

WHAT YOU WILL SEE

Calls noted and rated as you chat

Receipts when calls are settled

GOOD TO KNOW

- It replays a real match ball by ball as if live: ICC Men's T20 World Cup Final 2024, India v South Africa (data: Cricsheet).
- Rahul, Priya and Kabir are scripted demo friends, labelled "demo".
- Whether a call is right is decided by the scorecard in code, never by the AI. The AI only reads the sentence.
- If the AI is busy, built-in rules read the message so the chat keeps working.
